WAY Flexible Global Growth Portfolio Fund

Investment Manager's Report For the six months ended 30 September 2024 (unaudited)

Investment Objective

The objective of the Fund is to provide maximum capital growth.

Investment Policy

The Fund will seek to achieve its objective from an actively managed and diversified portfolio of collective investment schemes (including investment trusts) with exposure to underlying assets such as equities, bonds, money market instruments, property and commodities. The Investment Adviser will not be constrained by underlying asset type or geographical split of the Fund's portfolio. The Fund may be invested up to 100% in schemes investing in equity markets, in appropriate market conditions.

The use of derivatives is not permitted but borrowing of up to 10% of the Fund's net asset value will be permitted on a temporary basis. The Fund may invest in hedged share classes of underlying funds.

Although the Fund will normally remain fully invested, the property of the Fund may consist of up to 10% cash or near cash where this may be reasonably regarded as necessary in order to enable the pursuit of the Fund's objective, settlement of redemptions of units and the efficient management of the Fund in accordance with its objectives or other purposes which may be reasonably regarded as ancillary to the objectives of the Fund.

Investment Review

The WAY Flexible Global Growth Portfolio Fund (E Accumulation unit class) rose 1.80% over the six months to 30 September 2024 while the IA Flexible Investment Shares Index rose 2.77%.

Leading western central banks began to reduce interest rates during the period under review but the pound's strength muted returns among the major asset classes, with global equities up 3.53% and bonds down 0.36% respectively in sterling. Retail price inflation eased further, with September figures for the US, UK and eurozone down at 2.4%, 1.7% and 1.7% respectively although services inflation was higher.

The Federal Reserve cut its policy rate by half a percentage point to 4.75-4.5%, the Bank of England cut Bank rate by a quarter point to 5% while the European Central Bank cut its main policy rate twice, taking it to 3.5%. Leading indicators suggested some major economies would continue to grow but eurozone indicators implied contraction. Middle East tensions escalated but oil fell 15.81% in sterling as global economic growth weakened.

US stocks returned 3.99% in sterling, led by technology stocks, up 7.82% as investors enthused about artificial intelligence. Within the portfolio, profits were taken through the partial sale of Polar Capital Global Technology and sale of the iShares Nasdaq 100 exchange-traded fund (ETF). Technology stocks may perform well in the longer term but stretched valuations may generate short-term weakness.

Within the global equity allocation, Dimensional Global Targeted Value, which has a small-company bias, fell 0.60% and the holding was reduced because smaller companies are typically more sensitive to economic changes and may underperform as growth slows. First Sentier Global Listed Infrastructure was increased. High interest rates had negatively affected infrastructure stock valuations but monetary easing may reverse this.

In addition, governments are encouraging power companies to achieve decarbonisation. This will involve significant extra capital investment, on which regulators will allow these companies to generate returns. Polar Capital Global Insurance, which focuses on non-life insurers benefiting from rising premiums, was also increased.

Labour won a landslide UK general election victory. The UK stockmarket, which has heavy weightings in cyclical sectors such as financials and energy, returned 5.79%, led higher by smaller companies, up 10.57%. With UK equities appearing attractively valued, supported by improving economic prospects, the UK equity allocation was increased, partly by way of a new holding in Fidelity Special Situations, a value-oriented investment.

Large cap value stocks in Japan did well in early 2024 thanks to yen weakness and the Tokyo Stock Exchange's corporate governance reforms and profits were taken from Man GLG Japan CoreAlpha. Japanese companies should benefit from digital transformation but the Bank of Japan's interest rate hikes and the yen strength that followed may weigh on investor sentiment.

WAY Flexible Global Growth Portfolio Fund

Investment Manager's Report (continued) For the six months ended 30 September 2024 (unaudited)

Investment Review (continued)

The portfolio benefitted from its overweight position in emerging market equities, up 7.78% in sterling, fuelled by the 24.78% rebound in Chinese stocks as China announced a stimulus package including interest rate cuts, state intervention in the stockmarket and measures to aid over-indebted property companies. Redwheel Next Generation Emerging Markets Equity was added.

Emerging market valuations ended the period significantly below those of developed markets and US monetary easing may continue to weaken the dollar. This typically provides a tailwind. The International Monetary Fund predicts 4.2% economic growth for emerging markets in 2025 against 1.8% for developed economies.

UK government bonds and sterling investment-grade bonds and high-yield bonds returned 1.29%, 2.13% and 5.79% respectively. Global government bonds, which provide an attractive low-risk yield, were increased. The sterling-hedged holding in Pimco Global Low Duration Real Return was increased because core inflation may remain sticky. In a US election year, bipartisan support for Sino-US trade restrictions may also be inflationary.

Lower interest rates may provide a tailwind for equities and bonds. Longer-dated government bonds offer low-risk positive real returns while shorter-dated inflation-linked bonds provide protection should inflation remain higher than expected. Infrastructure and commercial insurance stocks on low valuations provide diversification and may prove more defensive. With US politics increasingly polarised, political risk may be a significant factor in markets.

The Operating Charge is the total expenses paid by the Fund in the period, annualised, against its average Net Asset Value. This will fluctuate as underlying costs change.

The Fund has invested in Collective Investment Schemes during the year and where any such schemes were held at the Fund's accounting reference date, the expenses incurred by these schemes are included in the above Operating Charges. From November 2023, the underlying costs relating to closed-ended funds have been excluded from the Fund's Synthetic expenses. Where closed-ended funds are held within the Fund's portfolio, this will have the effect of reducing the Operating Charges figure shown above.

- The indicator is based on historical data and may not be a reliable indication of the future risk profile of the Fund.
- The risk and reward category shown is not guaranteed to remain unchanged and may shift over time.
- The lowest category does not mean 'risk free'.
- The Fund appears as a "5" on the scale. This is because the Fund by its nature has exposure to equity securities which can experience high rises and falls in values.

Risk Warning

An investment in a Unit Trust should be regarded as a long term investment. Investors should be aware that the price of Units and the income from them may fall as well as rise and investors may not receive back the full amount invested. Past performance is not a guide to future performance. Investments denominated in currencies other than the base currency of a fund are subject to fluctuation in exchange rates, which may be favourable or unfavourable.

Notes to the Interim Financial Statements For the six months ended 30 September 2024 (unaudited)

Accounting Basis, Policies and Valuation of Investments

Basis of accounting

The Financial Statements have been prepared under the historical cost basis, as modified by the revaluation of investments and in accordance with FRS 102 "The Financial Reporting Standards Applicable in the UK and Republic of Ireland", the Statement of Recommended Practice ("SORP") for Financial Statements of UK Authorised Funds issued by the Investment Association in May 2014, the FCA's Collective Investment Schemes Sourcebook ("COLL") and the Fund's Trust Deed.

The accounting policies applied are consistent with those of the audited annual Financial Statements for the year ended 31 March 2024 and are described in those Financial Statements. In this regard, comparative figures from previous periods are prepared to the same standards as the current period, unless otherwise stated.

As described in the Certification of Financial Statements by Directors of the AFM on page 4, the AFM continues to adopt the going concern basis in the preparation of the Financial Statements of the Funds.

Basis of valuation of investments

Market value is defined by the SORP as fair value which is the bid value of each security.

Collective Investment Schemes are valued at quoted bid prices for dual priced funds and at quoted prices for single priced funds, on the last business day of the accounting period.

All investments are recognised and derecognised on trade date, and any trades that occur between valuation point and close of business are included in the Financial Statements.

Non-observable entity specific data is only used where relevant observable market data is not available. Typically this category will include single broker-priced instruments, suspended/unquoted securities, private equity, unlisted close-ended funds and open-ended funds with restrictions on redemption rights.
